This study focuses on UX strategy, transactional security, and regulatory compliance.

COMPANY Entain (Sportingbet, BetMGM, Betboo)	MY ROLE Senior Product Designer	FRONTS KYC & Transactional Security
STRATEGY Mobile-First / Mobile-Only	COMPLIANCE Government Approval 2025	PAYMENTS PIX & CPF Validation

01 · CONTEXT

The Race for Global Regulation

In 2024, with the new Betting Law in Brazil, I was selected to join an elite group of 10 specialists at Entain (Sportingbet, BetMGM, and Betboo). My mission was to participate in the tropicalization of these brands, acting as a bridge between us and the technical teams based in India and Canada.

The dynamic required fluent English communication and intercultural management to maintain the groups global standards while adapting the product to the Brazilian reality.

02 · MOBILE-FIRST STRATEGY

The Brazilian Behavior

> Unlike mature markets in Europe and the USA, where desktop still has a relevant share, Brazil is a strictly mobile-first market.

Market Data: With approximately 80% to 90% of Brazilian bettors using exclusively smartphones to play (Source: Mobile Time/Opinion Box and Datafolha), my focus was on ensuring a frictionless mobile experience, with optimized performance for varied connections and total absence of bugs, ensuring user confidence in a platform with high financial turnover.

03 · MY ROLE

KYC and Transactional Security

I was in critical fronts for business viability, with a special focus on Payment Localization (PIX).

Since PIX is a local exclusivity, I designed flows with anti-fraud safeguards: deposits and withdrawals allowed exclusively via accounts linked to the holders CPF, combating money laundering.

KYC Flow
Rigorous identity verification structuring for government compliance.

PIX Strategy
Payment system adaptation with real-time ownership validation.

Anti-Fraud
Implementation of armored financial safeguards for platform integrity.

04 · DISCOVERY & VALIDATION

Data-Driven Design

I validated the flows and was able to review them using Maze, ensuring that security locks were not an issue or increased the churn rate, and were understood as a security benefit rather than a barrier.

I monitored behavior via GA4, optimizing the registration funnel and time-to-market of the first deposit. Integration with Único for facial biometrics made the KYC robust and agile.

05 · HISTORICAL MILESTONE

1st Place in Approval

> The technical rigor in the design resulted in an unprecedented milestone: Sportingbet was the 1st betting house to be officially approved to operate in Brazil on January 1, 2025. 🥇

We were the 4th to be evaluated by the government but the first to receive the green light, thanks to the precision of the compliance flows presented.

06 · VIP EXPERIENCE

Retention and Culturalization

I structured the VIP Casino area, plugging in global providers into an intuitive interface adapted to the Brazilian vocabulary.

The launch with the slogan "Faz o teu nome" (Make your name) connected the products technical robustness to the Brazilian cultural passion.

07 · RESULTS

Consolidated Leadership

We established a security and UX benchmark for the regulated market.

First regulated operating license granted in Brazil

Armored financial ecosystem with CPF validation

Optimized mobile experience with high retention
