⚠️ **Confidentiality Note**

Due to NDA agreements, visual details shown are restricted.

The focus of this study is field research, friction reduction strategy, and business impact.

COMPANY	MY ROLE	FOCUS
Bradesco (via Deeploy)	UX Consultant / Product Designer	Research, Strategy, and UX
PLATFORM	**DELIVERABLE**	**IMPACT**
Web (B2B)	Credit flow redesign	+30% Conversion

01 · THE CONTEXT

The Competitiveness Gap

Acting as a third-party consultant hired by Deeploy within **Bradesco**, I received a critical business challenge: to understand why dealership and car shop salespeople **were not using** the Bradesco platform to submit customer credit applications, preferring **competing players** (Safra and Itaú).

The bank was losing market share at the crucial moment of the sale.

02 · DISCOVERY

Leaving the Office and Going into the Field

After inconclusive desk research and remote interviews that did not reveal the real user pain point, I requested authorization for an **ethnography/field research**.

The Reality of the Shops: Going directly to the dealerships, I observed the frantic dynamics of the sale.

The "Aha!" Moment: I identified that the barrier was not visual, but operational. While competitors required only 4 or 5 fields for a pre-analysis, Bradesco required a full form with almost 20 fields. In the "heat" of the sale, the salesperson prioritized the fastest path of least resistance.

03 · STRATEGY AND NEGOTIATION

The "Pre-Form"

I returned to the bank with a clear diagnosis and acted as a bridge between the **Product, Tech** and **Legal** teams to make a solution possible: drastically reducing the initial phase of the sale and improving data entry without violating compliance standards.

THE SOLUTION AND THE FLOW

The Solution: We implemented a Credit Pre-Approval flow with only 4 essential fields:

- Name
- CPF (Tax ID)
- Address
- Mother's Name

The Flow: If the credit was pre-approved and the value met the customer's needs, the salesperson was then motivated to complete the remaining data, as the sale was already "guaranteed".

04 · THE HUMAN FACTOR

Co-Creation and Engagement

The best decision I could make on this project was the biggest differentiator: Bringing the salespeople closer, to make them feel part of the solution, feel **heard** and most importantly **answered**!

Sense of Belonging

Bringing salespeople closer to the craft of the solution and showing them the process/progress made them feel welcomed.

Ownership Feeling

By asking for opinions and showing prototypes during visits, I turned users into "owners" of the solution.

Organic Marketing

The feeling of belonging generated such strong "word-of-mouth" marketing among salespeople that tool adoption exploded even before any official bank advertising campaign.

05 · RESULTS

Business Impact

Organic growth validated the solution even before media investment, proving that design focused on the real user pain point is the best marketing strategy.

Conversion Increase: The volume of applications submitted via Bradesco grew 30% right after implementation.

Operational Efficiency: Drastic reduction in response time at the Point of Sale (POS).

MVP Success: Validated organically.
